1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 27, 2003 has been entered.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 11-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Potter et al. ('018) or Jacobs et al. ('902) or Slack et al. ('519 or '163).

Art Unit: 1711

Patentees disclose the reaction of (cyclo)aliphatic diisocyanates, including isophorone diisocyanate and hexamethylene diisocyanate, with monols, including cyclic alcohols, in the presence of a catalyst to yield a polyisocyanate mixture containing allophanate and isocyanurate groups. Additionally, the references disclose ratios of diisocyanate to monol that overlap those claimed by applicants. Furthermore, the references are considered to at the least render obvious the deactivation of the catalyst and the reduction of the residual monomer content. See column 5, lines 59 and 60 within Potter et al. See column 6, lines 8 and 9 within Jacobs et al. See column 3, line 46 and 47 within Slack et al. ('519). See column 4, lines 44-46 within Slack et al. ('163).

4. Though patentees disclose monol species in addition to those claimed, the position is taken that it would have been obvious to select the cyclic alcohols from those disclosed, since one would have expected viable products to result from the use of any of the disclosed monols.
